F2837xD Quick CCS Project Migration

The Delfino F2837xD device support header files have received a series of changes beginning with v1.20 of F2837xD device support. For those users with current projects using device support headers from **v1.00** or **v1.10**, a CCS project migration script has been developed to ease project transition to using the latest headers.

The "**How_to_use_F2837xD_Migration_Script.pdf**" documentation and project migration script are located within the following directory:
